Commissioner for Patents  
P.O. Box 1450  
Alexandria, Virginia 22313-1450

Sir:

**AMENDMENT**

The specification and claims have been amended to overcome various  
objections and rejections. All amendments follow the discussion in the interview  
on March 22, 2006 during which agreement was reached that these amendments  
will overcome the objections and rejection in the outstanding office action. The  
amendments are discussed in further detail below. No new matter has been added.

**Specification**

The outstanding office action contains a number of objections to informalities.  
Next to the first TBN, applicant has detailed the widely used abbreviation as Total

CERTIFICATION OF FACSIMILE TRANSMISSION		
I hereby certify that this paper is being facsimile transmitted to the Commissioner for Patents facsimile number 1-571-273-8300 on the date shown below.

Base Number. TBN is a measure of alkalinity that applies to individual additive components such as metallic detergents, or to the finished lubricating oil. TBN is required in a finished lubricant in order to chemically neutralize acidic species that either contaminate the oil or are generated in situ as the oil degrades. Since Total  
5 base number is well know in the art and is used commonly it is not new matter.

NGEO has been amended to Natural Gas Engine Oil which is also a term and abbreviation that is well known in the art.

10 VI has been amended to Viscosity Index another term that is well known in the art.

API has been amended to American Petroleum Institute which is an institute that establishes recognized standards in the industry and thus is well known in the  
15 art. An API standard is widely recognized to be the generic terminology in this art.

#### Claims Objection

Claims 3 and 8 have been amended to correct the spelling of phosphorous.  
20 Since this is an obvious typo, no new matter has been added.

#### Claims Rejection 35 USC 112

Agreement was reached regarding the sulfated ash rejection. In the  
25 specification, the ASTM standard for determining supplanted ash was disclosed and this standard is well known in the art.

Claims Rejection 35 USC 103

Applicant is amending the claims to have a range of zinc  
dialkyldithiocarbamated from about 0.06 vol% to 01.15 vol%. Also phenolic  
5 antioxidants were amended to have a range of 0.5 vol% to about 1.9 vol%. It was  
agreed this amendment overcomes the obviousness rejection. Support for this  
amendment is found in Table 1 and paragraph 26.

Respectfully submitted,

10
